

Usage Guide and Quick Tips

Overview

Your VR Fire Training system comes with a headset, a left controller, and a right controller. On the top left of the headset is the **power button**, and at the underside of the left of the headset is the **volume up/down button**. There is also a knob at the back of the headset that can be adjusted for a better fit.

Turning on Your Headset and Recovering Play Boundary

To turn the headset on, hold the power button (top right of the headset) for three seconds until the light comes on. Press the "Home Button" on each controller to activate them. Once the headset boots up, it will prompt you to setup your 'Play Boundary'.

Whenever you use the headset in a new area, you will need to create a new "Boundary". If you've previously setup a boundary, you can choose the "Recover Play Boundary" option.

Setting Up a New Boundary

To setup a new boundary, first choose the "Custom" option to create a **minimum 10'x10' (3m x 3m) space**. Use the controller and trace an outline all the way around your space. You can add corners and sides until the boundary space is filled out.

After you finish setting up or recovering your Play Boundary, the Simulator will automatically load and your training can begin.

Training with Your Simulator:

Once the simulator has loaded, a virtual assistant will prompt you to look in her direction. Follow her instructions and she will start an introduction and beginner lesson. Once you're ready, you can jump straight into training by walking to the menu board and tapping the button to select your desired level.

While training, listen to the assistant for helpful tips and guidance. You can also press the "Play Video" button for a how-to video with instructions and goals for the current exercise.

Keeping your simulator running smoothly is the key to an enjoyable virtual reality experience. To ensure you get the most out of your sessions, here are some tips:

- To **Restart the App**, simultaneously press and hold the Trigger button and the X button, and then press the A button.
- To **Reboot the headset**, press the Power button for 3 seconds, release, then press the power button again for 3 seconds.
- Keep the sensors at the front of the headset unobstructed to maintain tracking accuracy.
- Ensure the training space is clear of people and obstacles to prevent injury.
- Keep the lenses clean with a microfiber cloth.
- Avoid leaving your headset in direct sun as **sunlight can burn out the screen!**

Streaming from your VR headset:

To Streamcast to the Miracast Dongle, a smart TV, web browser, or phone, both your headset and the target device must be **connected to the same Wi-Fi network**, and your target device must be **set to be discoverable**. To begin streaming, follow these steps:

1. Press the Pico button on either controller to open the pop-up menu.
2. Click on the "Streamcast to TV" option.
3. Select your target device (smart TV, browser, or phone app).
4. Click "Connect" next to the target device.
5. Wait a few moments for the stream to begin.
6. Click the back arrows to return to the training simulator.

You can confirm you are connected to the correct network under the "Current Network" section of this page. If you are streaming to the enclosed Miracast Dongle, it will generate its own Wi-Fi hotspot called "**MiraScreen-xxxxx**," and you can connect using the password "**12345678**."

Experience streaming issues? Try **restarting both** the headset and the target device.
